### Project Title

Acute and chronic stressors of the immune system

### Project Description

Establishing the impact of chronic infections and inflammation in immunosenescence is relevant for our understanding of the health of the elderly, a population experiencing rapid demographic growth. Comparative studies of immunological and inflammatory attributes are carried out in physio-pathological contexts presenting signs of immune aging, notably advanced age, chronic viral infections, and reduced thymic activity.

### Keywords

immune aging, viral & vaccine responses, inflammation

### Description of the Host Research Lab

The research conducted at the Cimi explores how the immune system functions and host-pathogen interactions, but also aims to develop immune-based therapeutic strategies and new ways to fight infectious diseases.
